$$\frac{\partial \theta}{\partial t} + \frac{\partial u_i \theta}{\partial x_i} = 0. \quad (1)$$
$$u_i = \bar{u}_i + u'_i, \quad \text{and} \quad \theta = \bar{\theta}_i + \theta',$$
$$\frac{\partial \bar{\theta}}{\partial t} + \frac{\partial \bar{u}_i \bar{\theta}}{\partial x_i} = -\frac{\partial \bar{u}_i' \bar{\theta}'}{\partial x_i}. \quad (2)$$
$$\overline{u_i' \theta'} = f(\bar{\theta}, \bar{u}_i) \quad (3)$$

or what in the jargon in our field is called a *parameterization*.

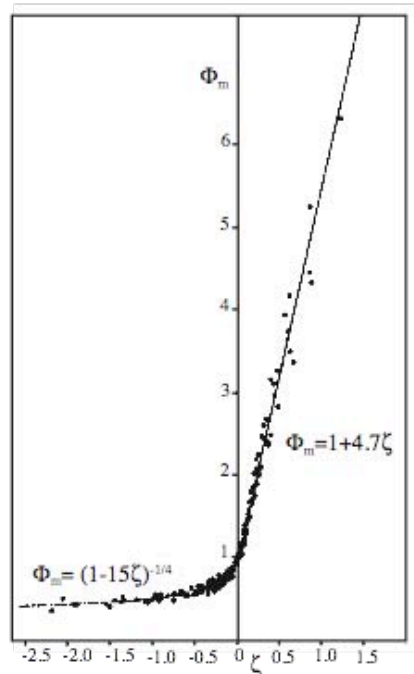

# What are the Atoms?

*(representing small scale processes in large scale simulations of the climate system)*

# Parameterizing Surface Exchange:

$$\overline{u'w'} = -u_*^2 = f(\bar{u}, \nu, z, \omega, r, h, d, T, \dots) \quad \text{perhaps } u_* = \alpha z (d\bar{u}/dz)$$

which can be written as

$$(d\bar{u}/dz)(z/u_*) = \Phi$$

where  $\Phi$  is universal. Alternatively, if other parameters come into play, one might conjecture that

$$(d\bar{u}/dz)(z/u_*) = \Phi(\zeta).$$

where  $\zeta$  measures that other parameter.

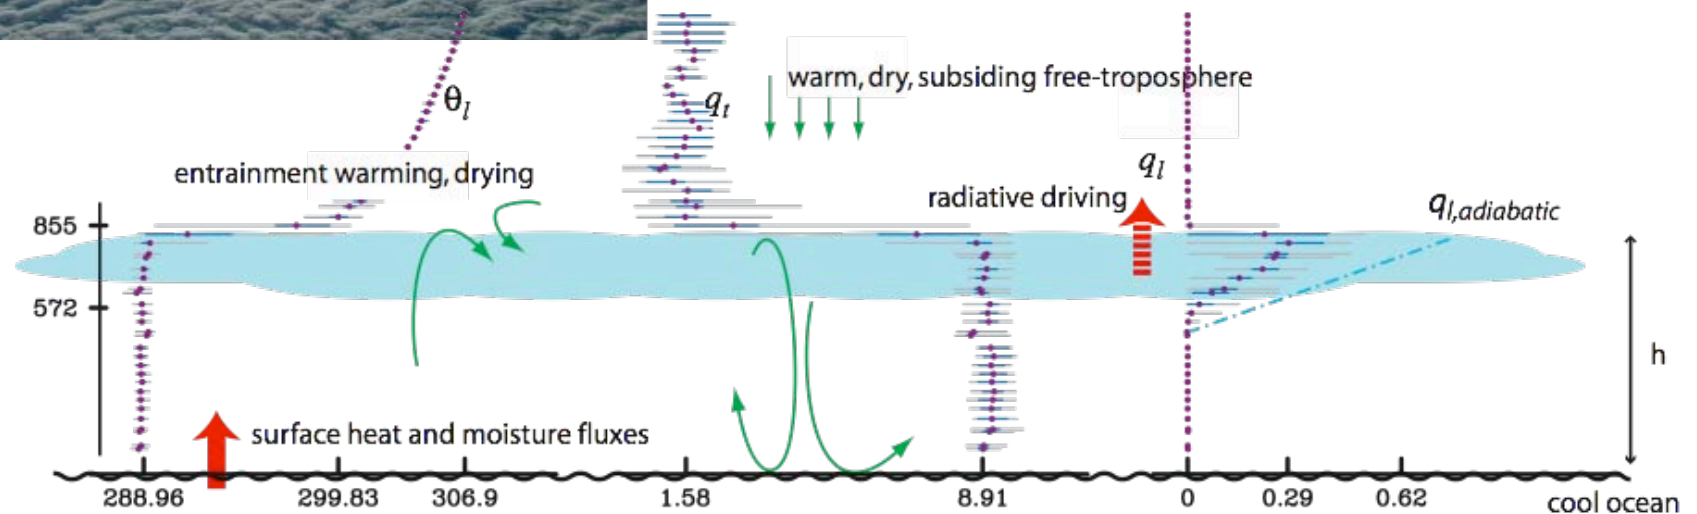

# A Three Step Process

1. Insight

2. Dimensional Analysis

3. Empiricism

# Stratocumulus Topped Boundary Layer

$$\frac{D}{Dt} \langle s \rangle = \overline{w' s'}_0 - \overline{w' s'}_h - (F_{h-} - F_0)$$

$$\frac{D}{Dt} \langle q \rangle = \overline{w' q'}_0 - \overline{w' q'}_h$$

$$\frac{Dh}{Dt} = W + E$$

Parameterize:

$$\overline{w' s'}_h = -E(s_+ - s) + F_{h_+} - F_{i-}$$

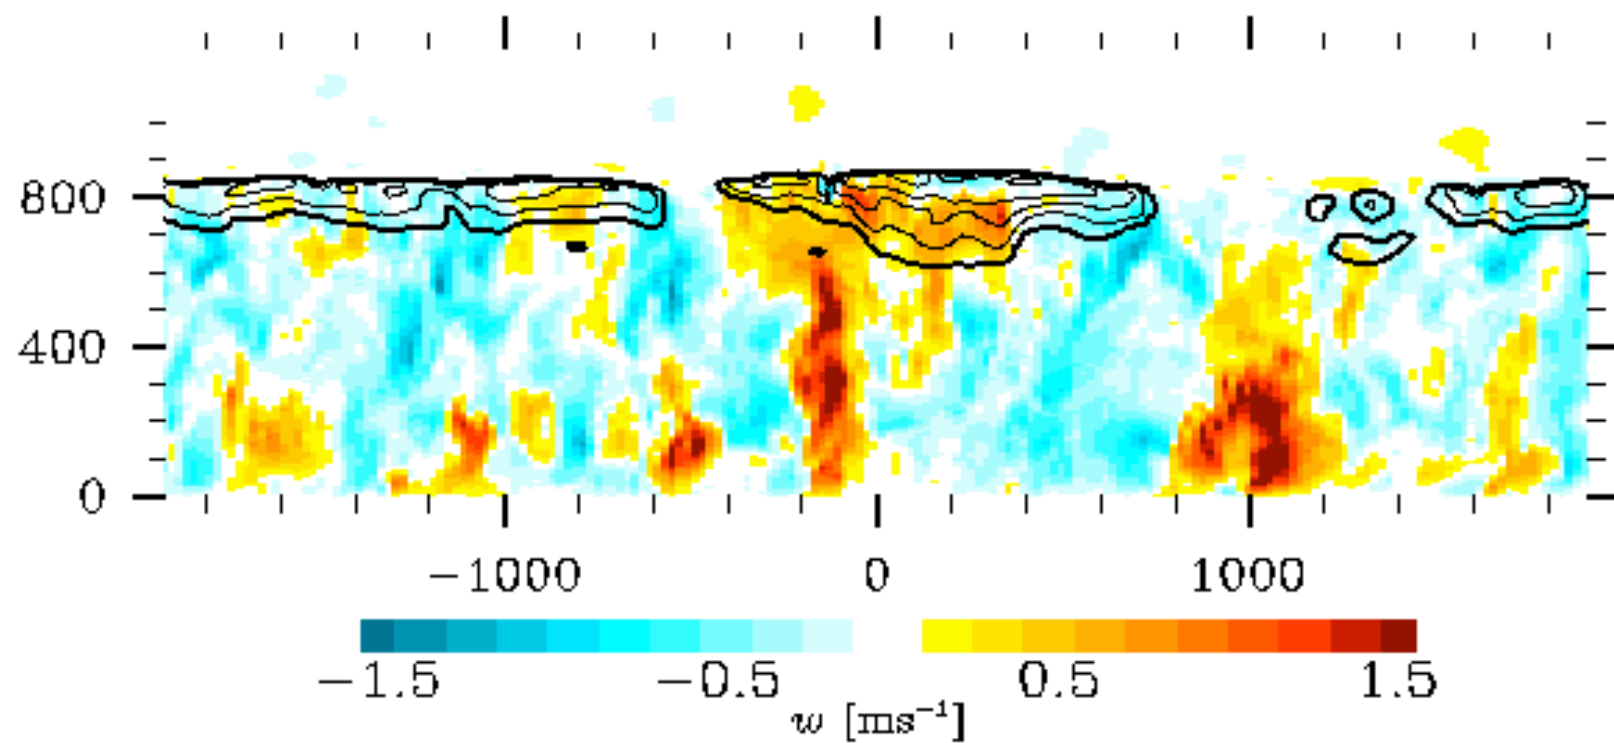

$$\overline{w' s'}_0 = -V(s - s_0)$$

$$\overline{w' q'}_h = -E(q_+ - q)$$

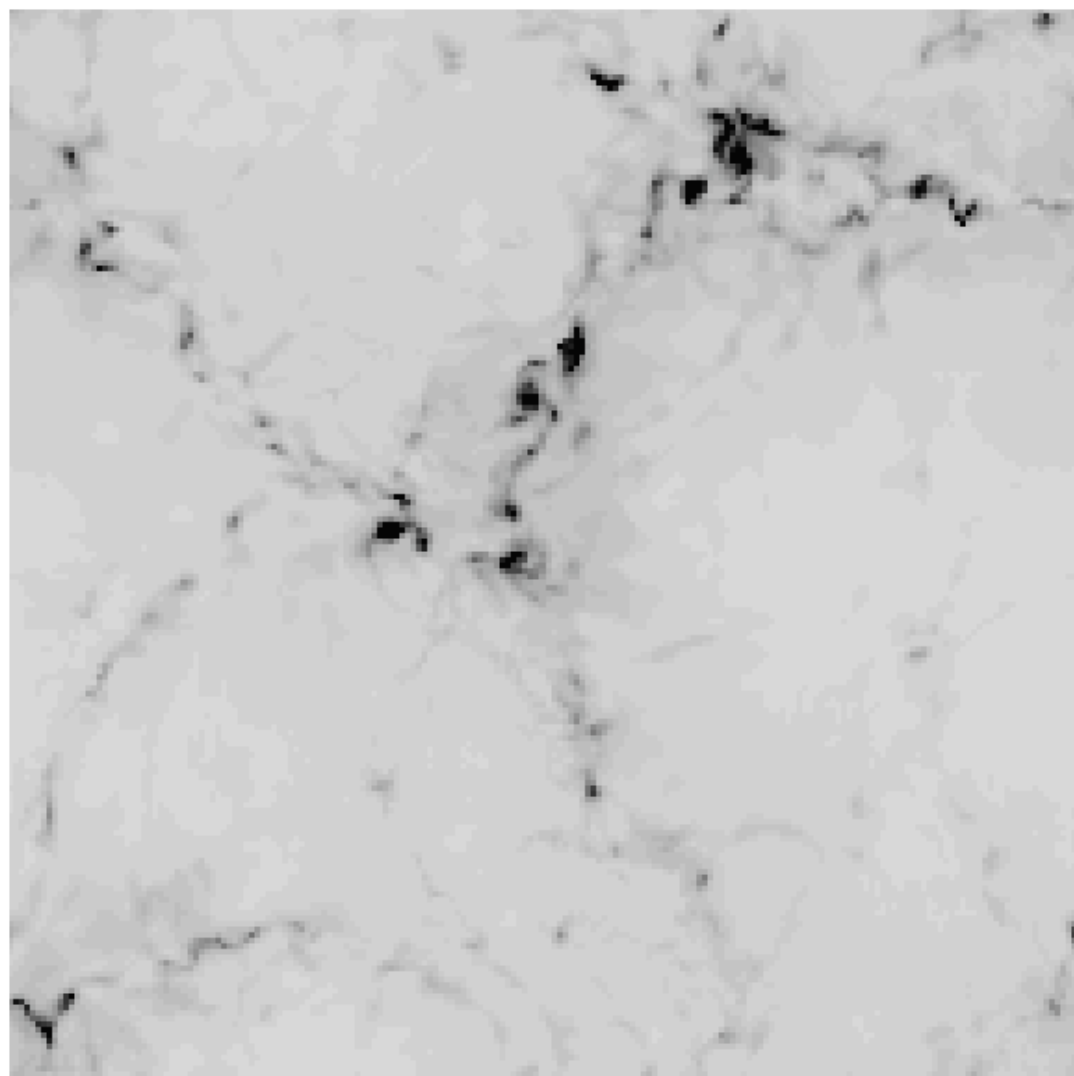

$$\overline{w' q'}_0 = -V(q - q_0)$$

with

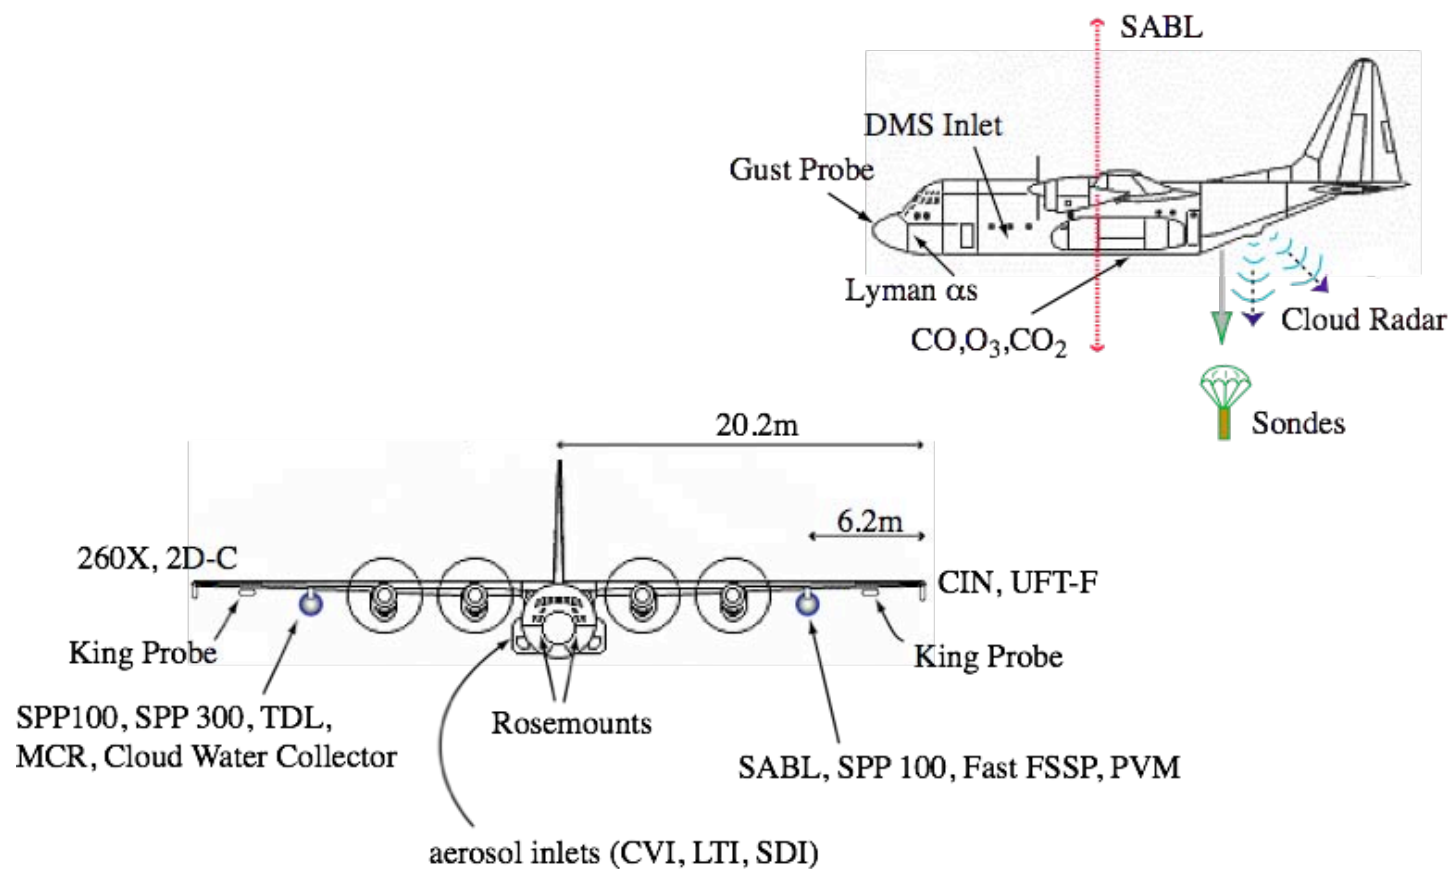

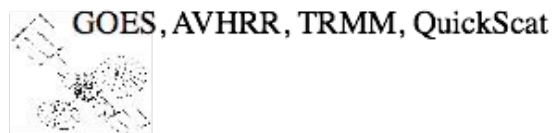

$$E = \alpha \frac{F_{h_+} - F_0}{s_+ - s}.$$

# Summary

1. The system is heterogeneous with myriad scales.
2. The intractability of the equations (turbulence) demands empiricism.
3. Some progress can be made by assuming local homogeneity and interpolating among idealizations.
4. The empirical step is non-trivial.
5. New, truly multiscale approaches which exploit massive computational capacity are promising, and only just beginning to be exploited.

Special thanks to David A. Randall for sharing his work on “super-parameterization” with me.
