

Beijing University of Posts and Telecommunications

Enhanced Routing for Intermittently Connected Mobile Vehicular Network

Tianle Zhang

Beijing University of Posts and Telecommunications

2011 China-America Frontiers of Engineering Symposium

March 28-30, 2011

Outline

1

Why to do

Current situation of communication tech. in ITS

- **Not ubiquitous & Not peer to peer & Not on site**
 - **Vehicular communication**
-

2

What to do

Ideas

- **Provide useful travel information**
 - **Keep informed everywhere**
-

3

How to do

Main works

- **Mobile relay network for travel information**
- **Vivid demonstration of shopping and traveling**

Why to do

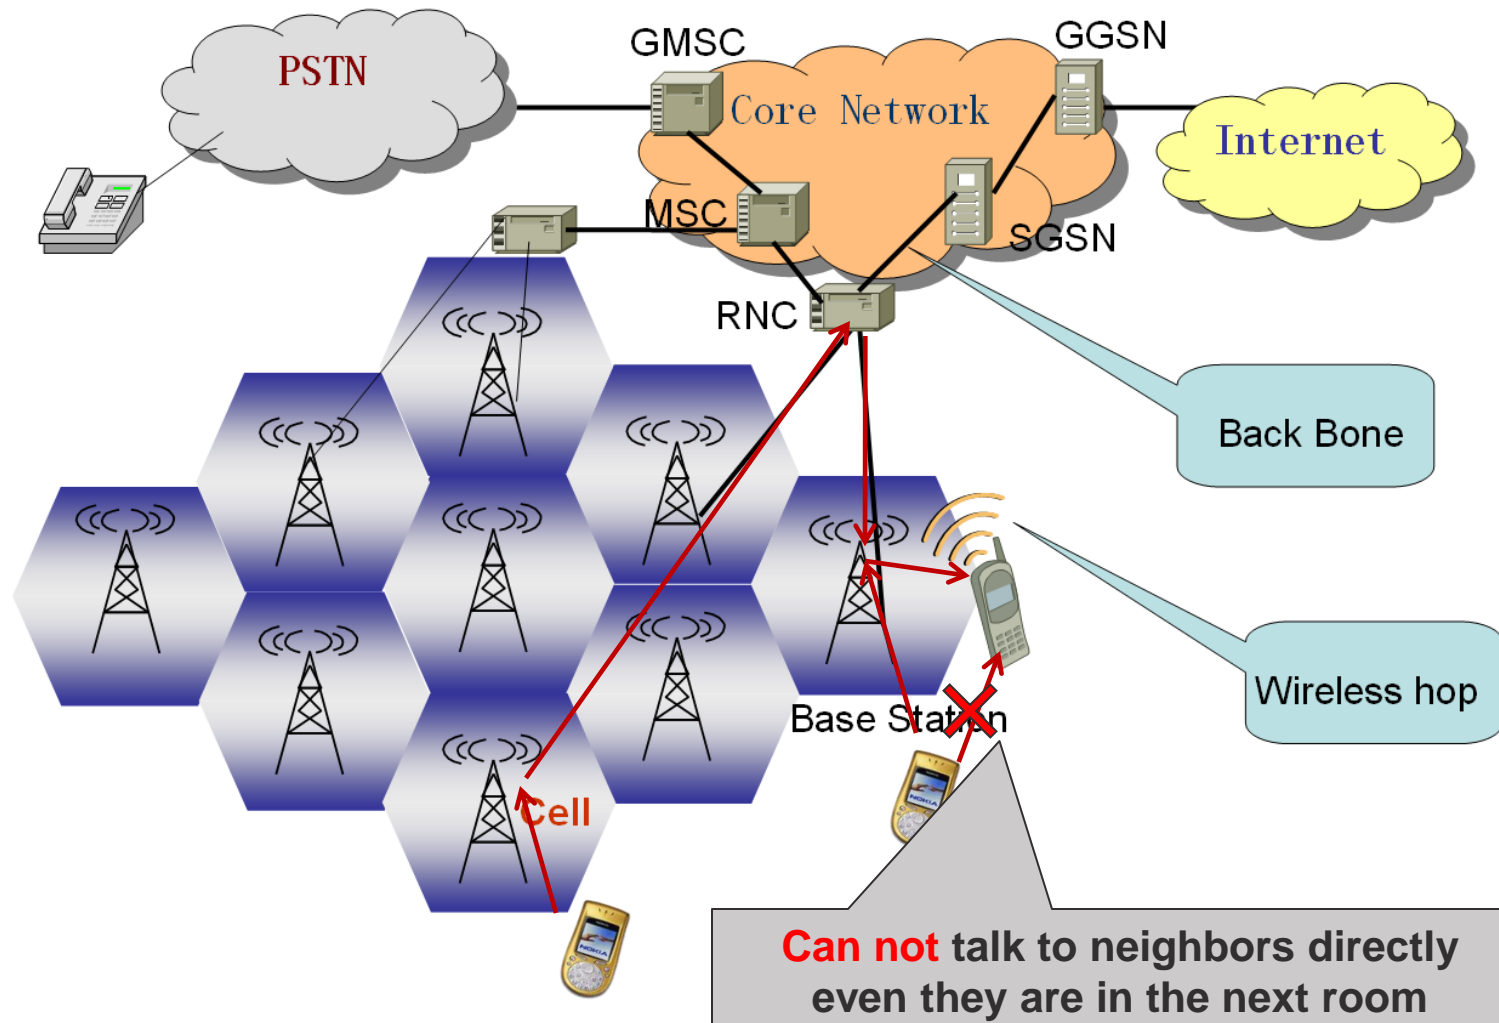

- Endeavor to achieve ubiquitous computing
 - Interact with the environment
 - Internet of Things **IOT**
- Traditional communication are not ubiquitous
 - Lack of information on moving
 - Not peer to peer
- Other restrictions
 - Fixed backbone
 - Blind spots
 - Isolated area
 - Mobility
 - Energy
 - Capacity

_____ Vulnerable, expensive

} _____ Partially covered

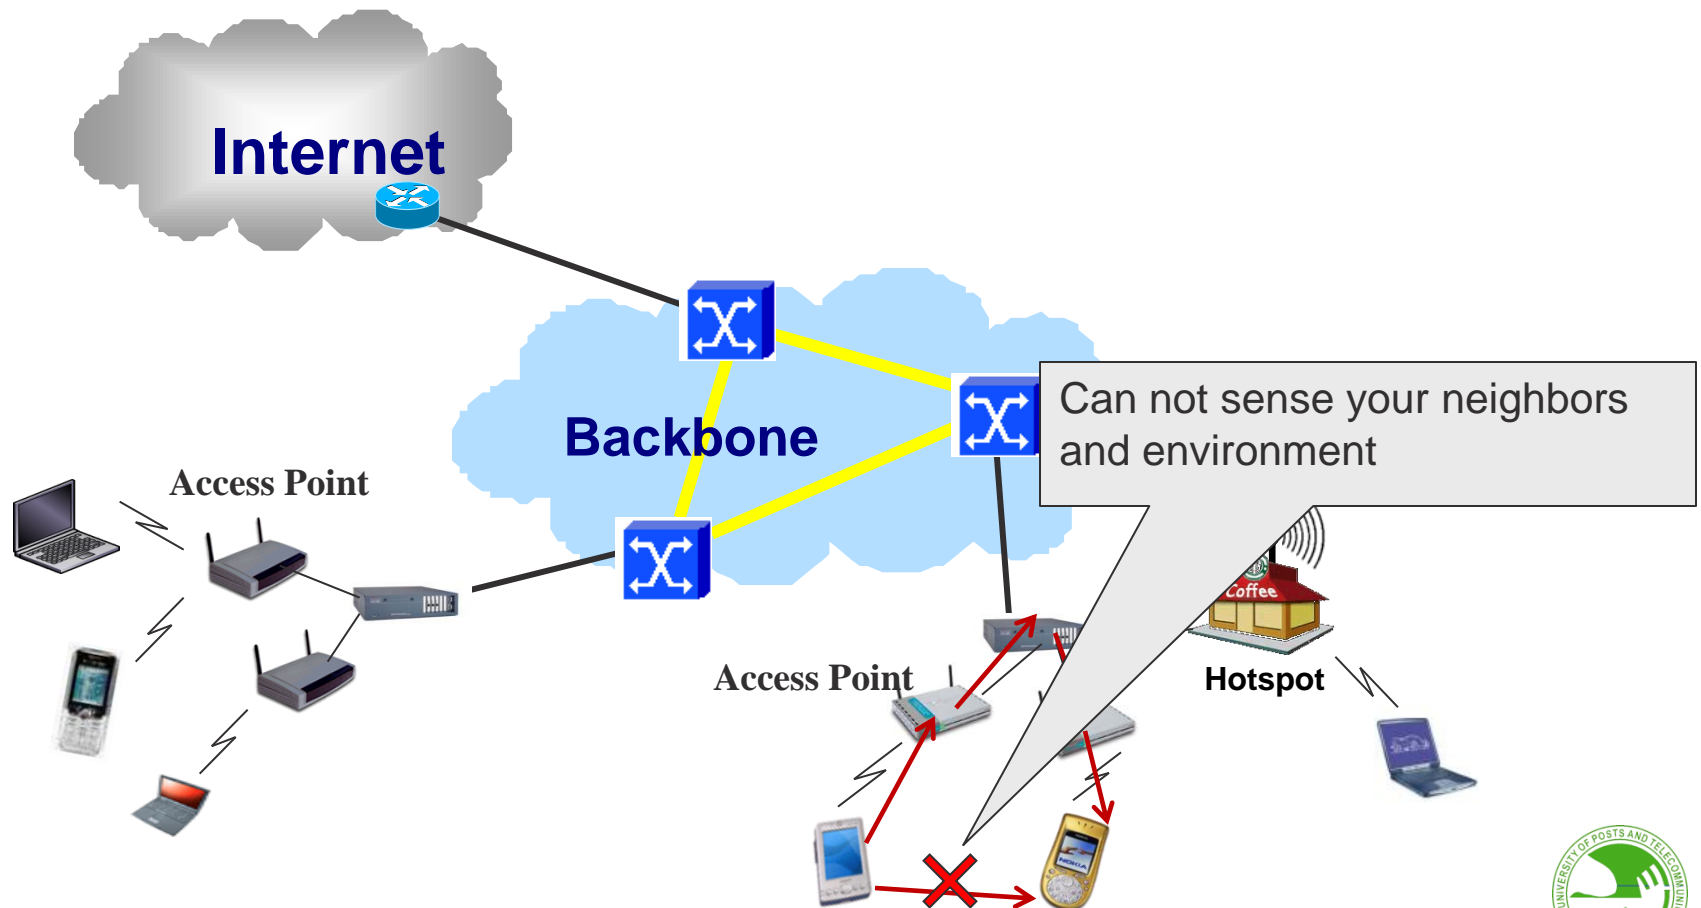

} _____ Frequently disconnected

Limitations of Cellular Networks

Limitations of WLAN

- Wired backbone + Wireless last hop

Vehicle-to-Vehicle communication

- Vehicle-to-Vehicle communication (V2V)
 - Peer to peer, interaction
 - Instant and random contact
 - None line of sight (NLOS)

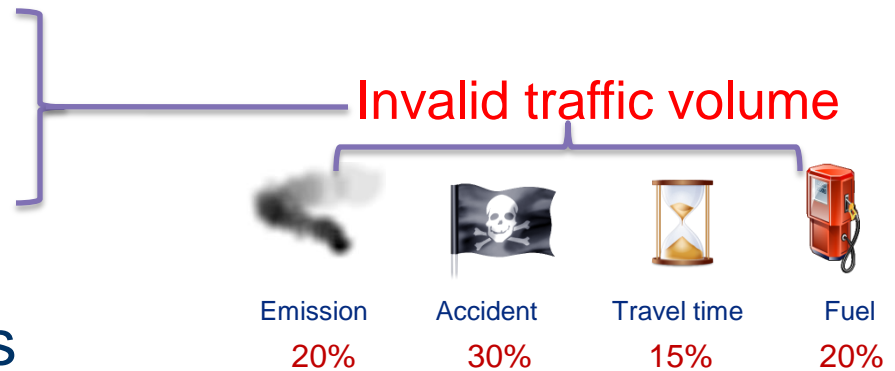

- Navigation
- Ask local driver for direction
- Traffic report
- Accident prevention and response

The effect on our life

■ Insufficient information access on moving

- Missing the favorite shop
- Make trip for nothing
- Wasted trip
- Traffic jam

■ Limitation of current ways

- By eyes, none line of sight
- By keyboard, inconvenient
- By SMS, garbage information
- By Phone call, ask what, ask whom?

Not peer to peer and not ubiquitous

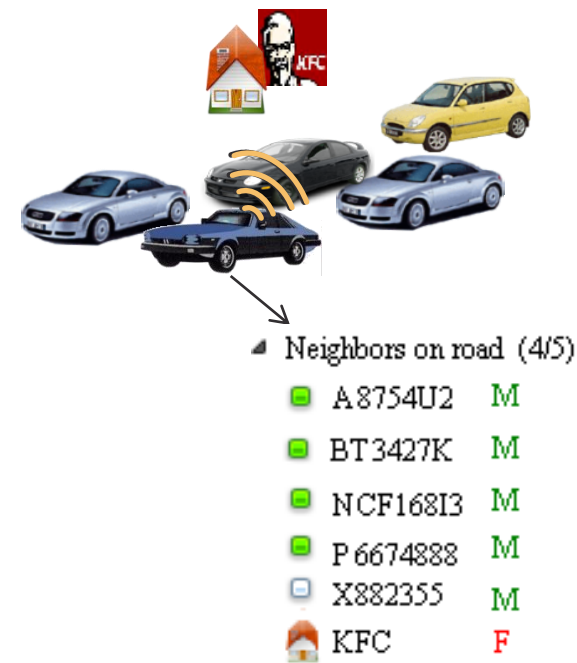

What to do

- Vehicular Ad hoc Networks
 - Let vehicles and shops carry message for us
 - Shops : fixed sites
 - Vehicles : mobile sites
- Mobile Relay Network (MRN)
 - Let cars sense the neighbor cars and shops
 - Let cars bridge the gaps

Messages from neighbors on road

- Sense the neighbor cars
- Sense the passing by shops
- Exchange messages
 - Traffic conditions
 - Navigation
 - Shopping information

Mobile Relay

- Communication among cars *in the vicinity*
 - To neighbors: Message pushing on encounter
 - To cars far away: Via multi-hop relay

Challenges

Traditional network protocol would **fail !**

How to do

- ① New routing protocol with “Store-Carry-and-Forward”
- ② Group division for clustering
- ③ Performance evaluation

Topology of MRN network

Path is **intermittently connected**
or **partially connected**

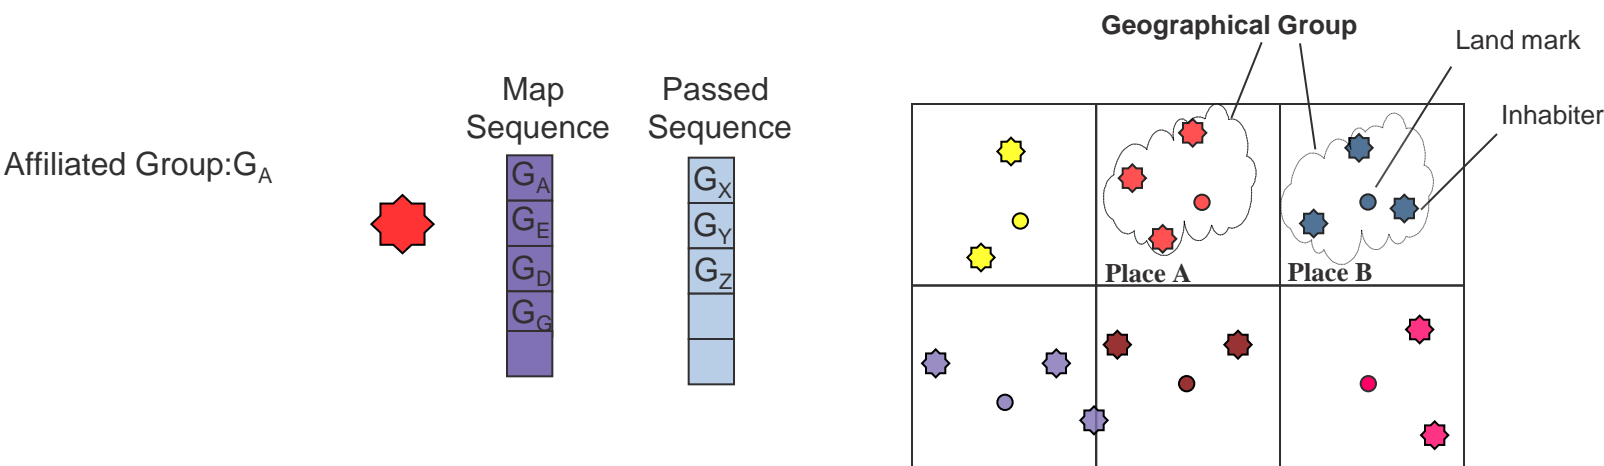

Routing

- Group sequence indicates the direction
 - Avoid the flooding of message copies
 - Increase the probability of success

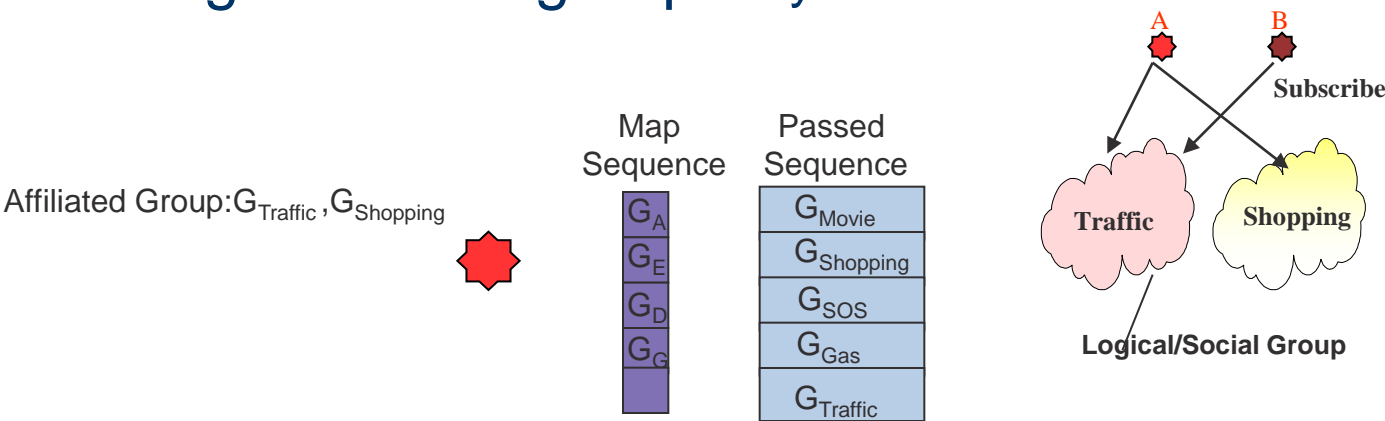

Group Definition

- Geographical group--by location or inhabitation

- Logical/social group --by interests or service

CTMC Evaluation Model

$$\begin{aligned}
 A_{Part} = \Pr(PP) &= \sum_{i=0}^n \Pr(ON_i) \Pr(PP|ON_i) \\
 &= \sum_{i=0}^n \left[C_n^i \frac{\rho^i}{(1+\rho)^n} \left(1 - \sum_{k=0}^{n-i-1} \frac{(T\mu)^k}{k! e^{T\mu}} \right) \right].
 \end{aligned}$$

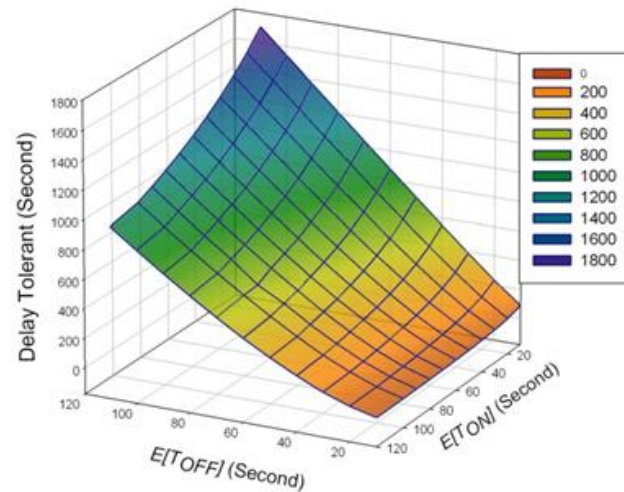

Evaluation Results

- Stable, subjected to large time scale disconnection
- Stable, subjected to low duty cycle of mobile networks

Evaluation Results

- Trade-off between energy and performance
 - Low power consumption
- Latency with different mobility models
 - Delay is under control

Demonstration

Scenario 1 Traditional ways of shopping.

- Time table and shopping list, trip and traffic
 - Time consuming
 - Overwhelmed by massive information

Scenario 2 New fashionable ways, BTW shopping

- Let shops find you on the way home
 - Just spare a while, Easy!
 - Find favorite things, Exciting!
 - Like a bee, Exploring!

Demo 1

- Traditional ways of shopping

GUI of terminal devices

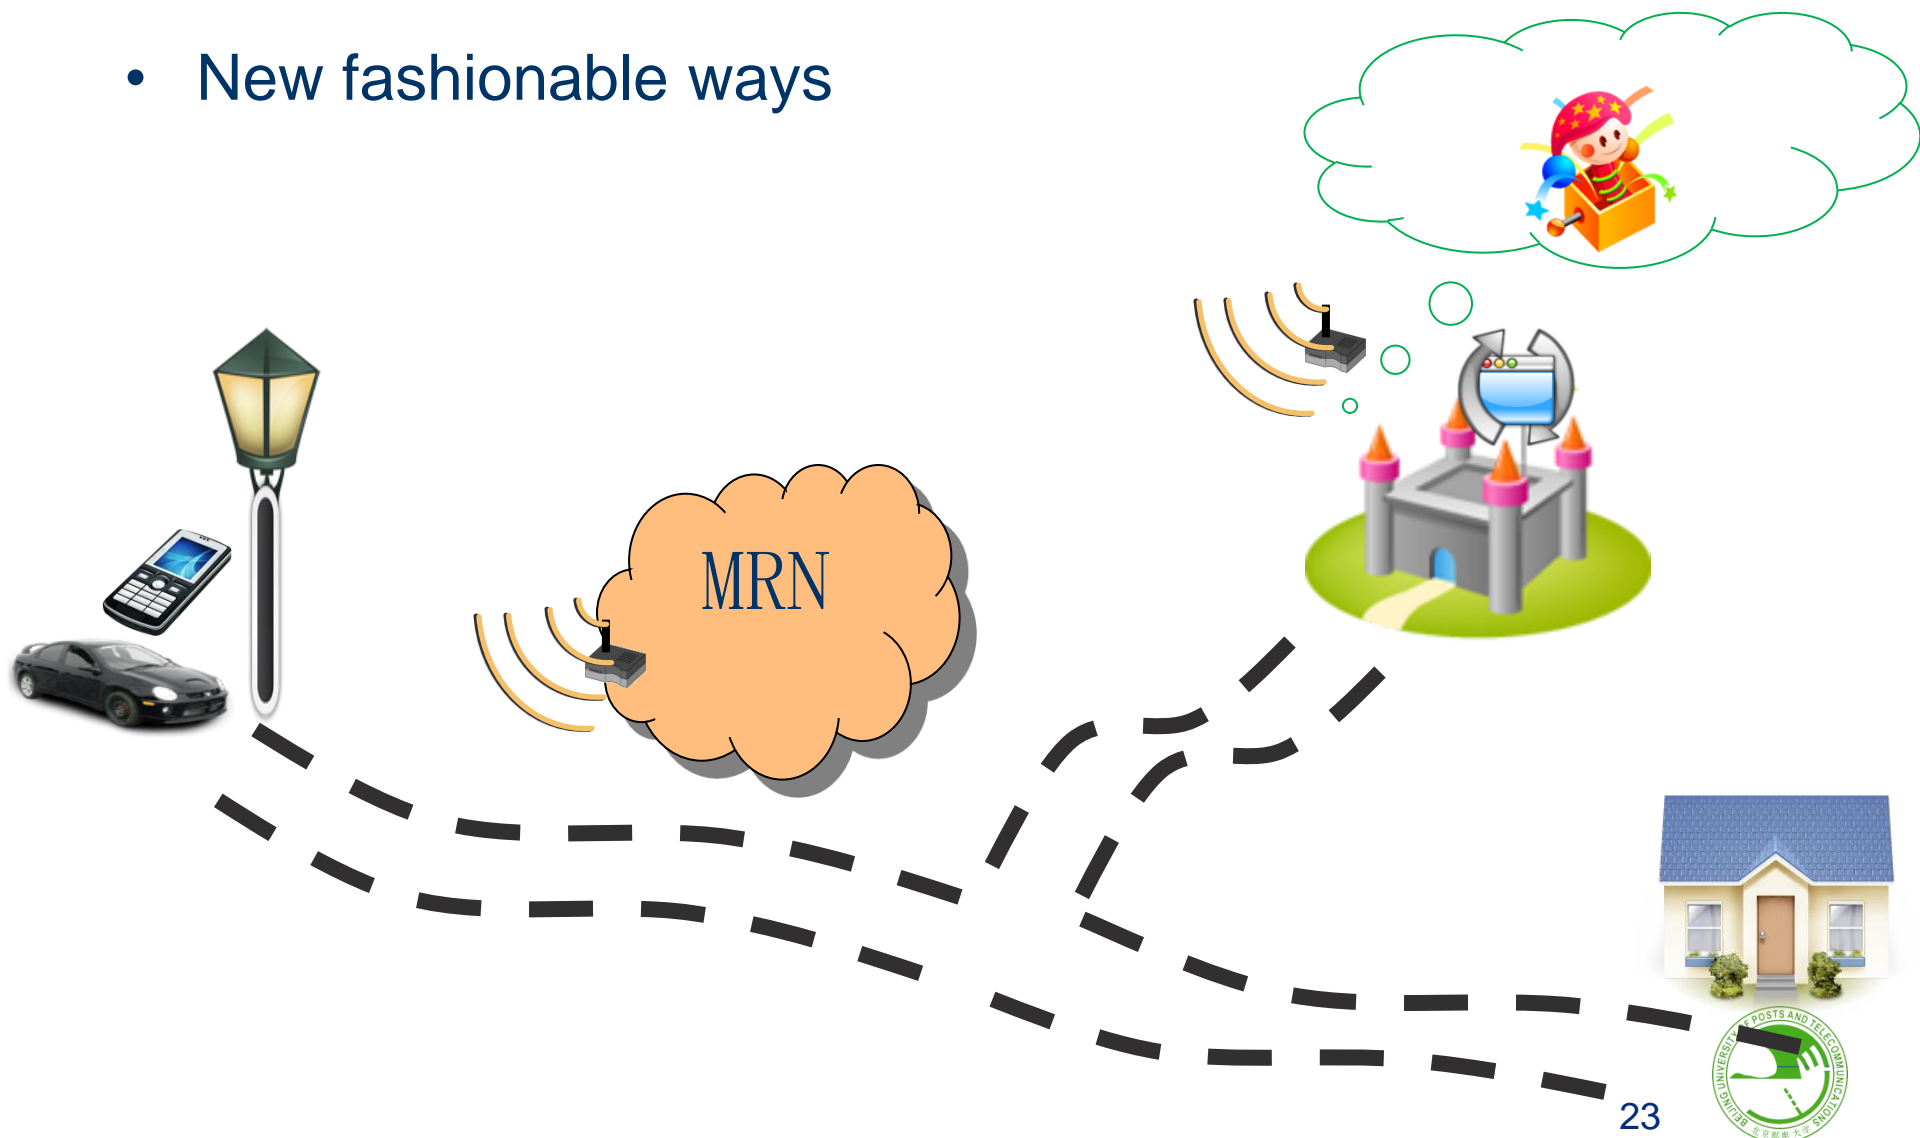

Mobile map of interesting things

Demo 2

- New fashionable ways

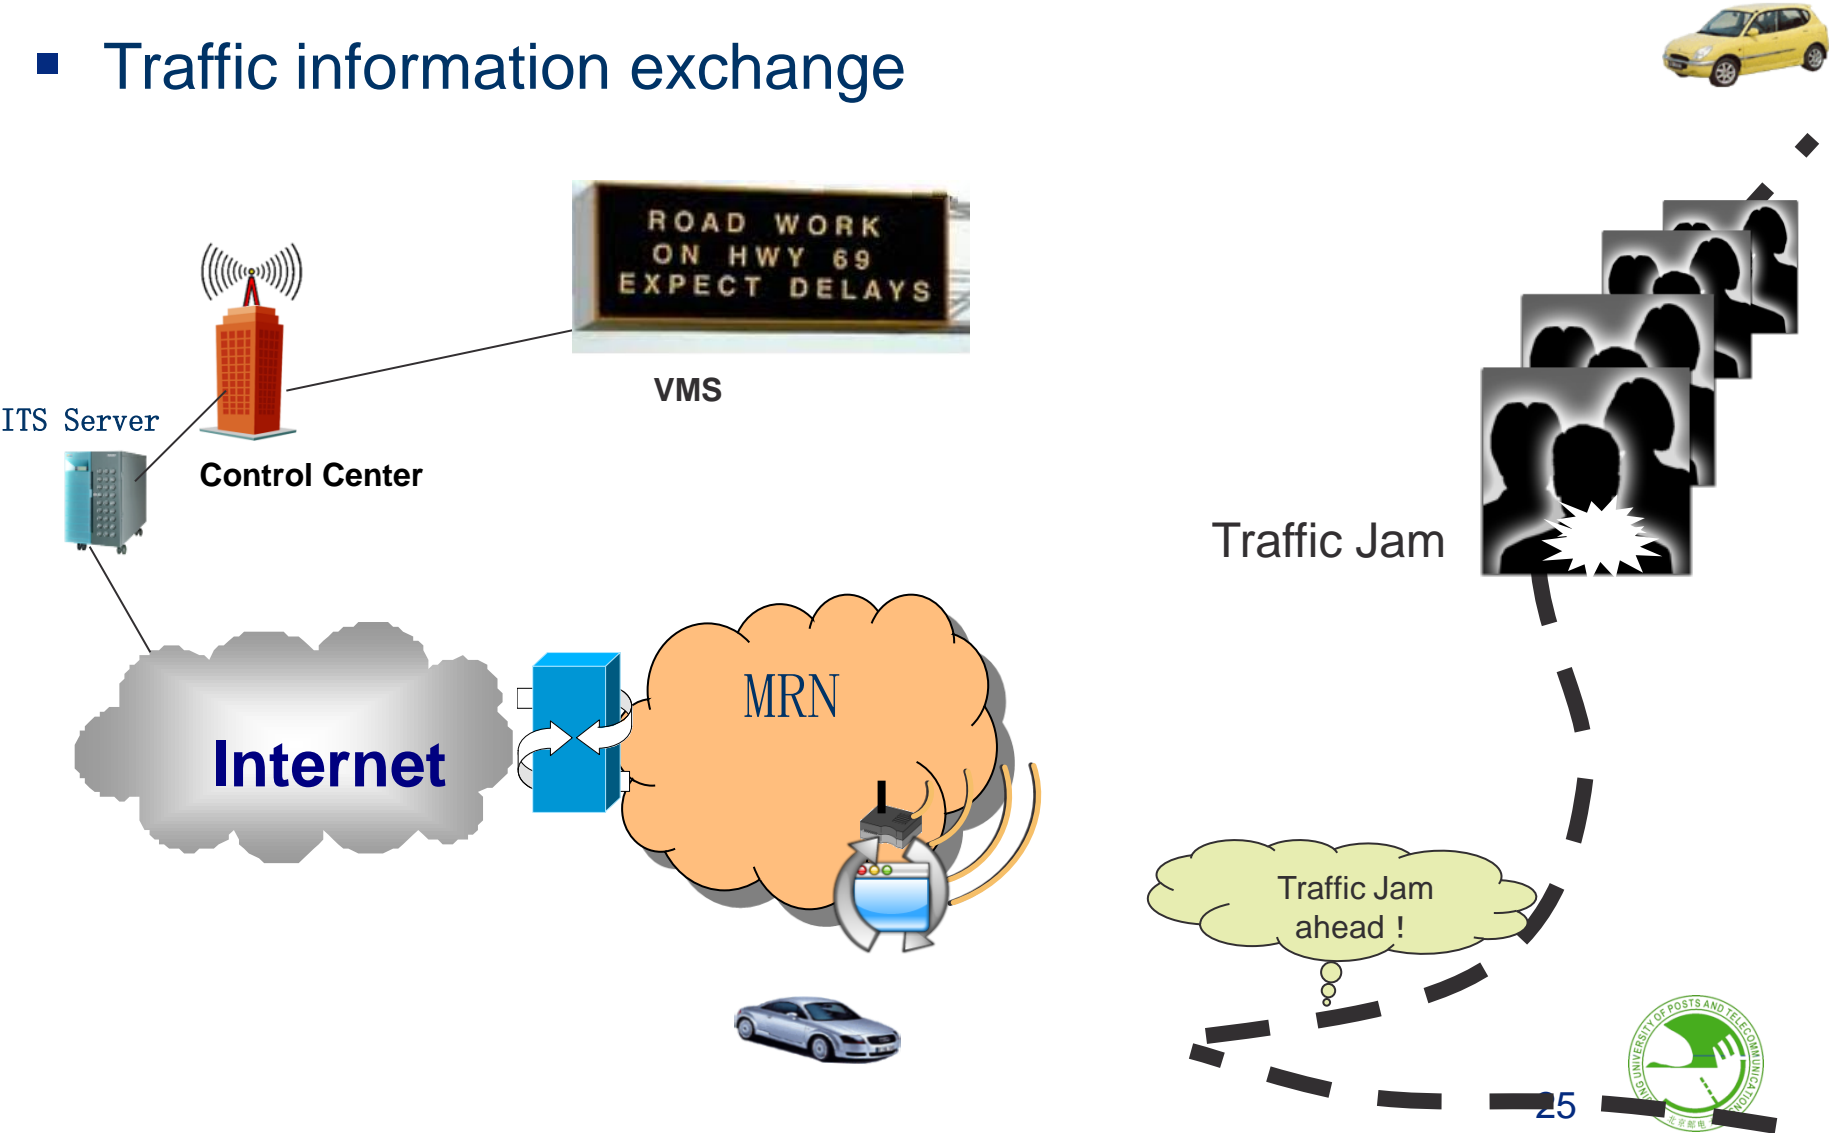

Sensing the discount information

Other applications

- Traffic information exchange

Sensing the neighbor vehicles

Demonstrated benefits

- Improve network convergence
 - ✓ Cover the blind spots
 - ✓ Help you be more informed
- Enhance service experiences
 - ✓ Help you be familiar with a new place
 - ✓ Help vendor make profit via new AD. Win-Win
- Apply to:
 - ✓ Local information service
 - ✓ Near range information exchange

Other considerations

- Not apply to:
 - Real time application such as video
 - Wide area communication
- Special issues
 - Information security and privacy
 - Safety and legality
 - Personal customers cultivation
 - Commercial partners join in
 - Real-life mobility and activity
 - Killer application
 - Travel information
 - Social community

Thank you!
